# Challenges and Restriction

## 01 Cultural Transition

Adopting Agile involves a shift in mentality from traditional project management approaches. Some businesses may find it difficult to change their existing culture to meet Agile concepts and ideals.

## 02 Complexity

Especially for firms that are new to the approach, implementing agile can be challenging. With so many Agile frameworks and approaches available, choosing the best one for a given firm may be challenging.

## 03 Commitment of Time and Resources

Adopting Agile successfully necessitates a substantial time and resource investment from stakeholders. This commitment may be a cause of concern for companies who are already suffering resource restrictions.

# Challenges and Restriction

## O4 Management of Scope

Agile initiatives have an emphasis on iterative and incremental development, which results in frequent scope adjustments. A solid change management methodology is required to properly handle these changes.

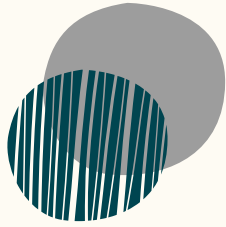

## O5 Team Structure

Agile teams are meant to be cross-functional, with individuals with various skills and knowledge. Assembling such teams can be difficult, especially for small or geographically distant teams.

## O6 Inadequate Experience

There may be a learning curve and early productivity barriers if teams or stakeholders are inexperienced with Agile principles. To ensure a successful transition, complete training and assistance are essential.
